

BE SURE YOUR RISK MANAGEMENT WORKS UNDER DURESS WITH OUR EMERGENCY PREPAREDNESS SYSTEM

With Ark's proprietary Emergency Preparedness System you can have your organisation's readiness for workplace risk events tested and reviewed in a methodical, results oriented manner, so that you can apply the necessary corrections and develop best practice.

GET A COMPLETE PICTURE OF YOUR organisation's preparedness for a disaster or emergency.

IMPROVE your safety culture and readiness.

PROMOTE the system to maximise your return by having staff alert and ready at all times so that you improve safety standards in-between tests.

IDENTIFY possible and obvious risks that could impact your staff, contractors, visitors, all primary operations, supply routes, etc.

INDEPENDENTLY MEASURE, in real time, the system and approach your managers would use to cope with and manage such events.

Emergencies can affect all sectors of your business - health & safety, business processes, human resources, premises management, etc.

Ark's Emergency Preparedness Test (EPT) is a unique, qualitative means of testing a property, site, estate, organisation or person(s) for how ready you are for dealing with an unannounced and unplanned event based on different scenarios.

Ark has developed an exclusive testing and reporting model based on the HSE guidance - "Performance indicators for the assessment of emergency preparedness in major accident hazards (Contract Research Report 345/2001)", published by the Health and Safety Executive.

This reporting model considers how you and your organisation perform in relation to nine key areas; planning, facilities, communications, response, records, performance, emergency operating plans and re-instatement and review.

Ark will investigate how prepared a building/location or person/group is for the unannounced and unplanned event and provide recommendations after the event for corrective action.

OUR EMERGENCY PREPAREDNESS SYSTEM SERVICES

- Management
- Planning
- Implementation
- Management Review
- Audits
- Hazard Identification
- Service Provision
- Risk Assessment
